

DIO-64/DIO-48

User's Manual

Warranty

All products manufactured by ICP DAS are warranted against defective materials for a period of one year from the date of delivery to the original purchaser.

Warning

ICP DAS assume no liability for damages consequent to the use of this product. ICP DAS reserves the right to change this manual at any time without notice. The information furnished by ICP DAS is believed to be accurate and reliable. However, no responsibility is assumed by ICP DAS for its use, nor for any infringements of patents or other rights of third parties resulting from its use.

DIO-64 64 Bit Digital I/O With Timer/Counter Board

1. Features

- 32 digital input lines
- 32 digital output lines
- Buffer output for higher driving capability
- 3 independent programmable 16 bit down counter
- One 16 bit counter , one 32 bit counter with a 4MHz time base
- Breadboard area for add-on circuit
- Backward compatible to 720 series card

1.1. Applications

- Digital I/O control
- Contact closure monitoring
- Alarm monitoring
- BCD interface driver
- Event and frequency counting

1.2. Specification

- **Logic inputs and output**

Input logic high voltage : 2.0V(Min)/5.0V(Max)

Input logic low voltage : -0.5V(Min)/0.8V(Max)

Input load current : -0.45mA(Min)/+70 μ A

Output sink current : +64mA(Max)

Output source current : -15mA

All outputs and inputs are TTL Compatible

- **Programmable counter/timer**

Frequency range : 0 to 4 Mhz

Input high voltage : 2.0V(Min) , 5V(Max)

Input low voltage : -0.3V(Min) , 0.8V(Max)

- **Clock source**

Clock frequency : 250KHz,500KHz,1MHz,2MHz (jumper selectable)

Frequency divider : can be divided by 100,10,1

- **Power consumption** : +5V @ 500 mA (Typical)

- **Dimension** : 930 x 135 mm

- **Environmental** :

Operating Temperature : 0 to 60°C

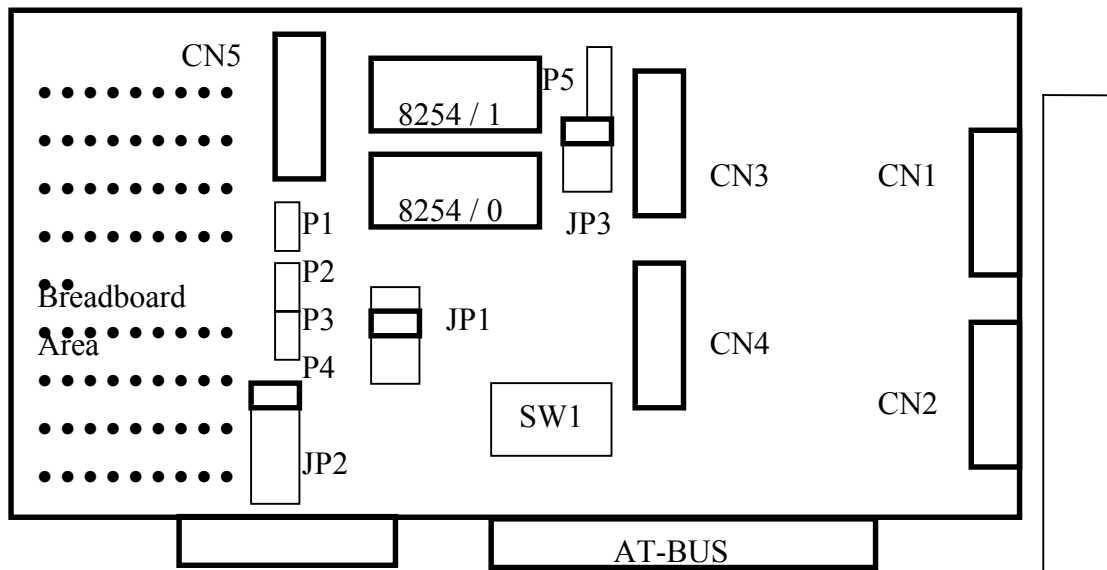

Storage Temperature : -20°C to 80 °C

Humidity : 0 to 90 % non-condensing

2. Functional Description

The DIO-64 provides 32 digital input channels , 32 output channels and 6 counter/timer channels The DIO-64 consists of two 16 bit input port and two 16 bit output port . The user can use the DB-16P (or 782 series) to interface to the input port (CN2,CN4) for isolation purpose. The user can use DB-16R (or 785 series) to interface to the output port (CN1,CN3) for relay control. There are four clock source, 2M, 1M, 500K, 250K, on the board. The user can choose any one by jumper setting .The user can use frequency from the soldering pad.

2.1. Layout

Model :

DIO-64 / 3 : 32 Digital I/O with 3 Timer / Counter Board
(One 8254 chip)

DIO-64 / 6 : 32 Digital I/O with 6 Timer / Counter Board
(Two 8254 chip)

2.2. Jumper setting

2.2.1 JP1 Clock source

The DIO-64 offers three clock sources which are 1M , 100K , 10K . These frequencies can be double, half or quartered by jumper setting.

X 1 : Default setting

For Example :

If you want to get a 10 K clock source , you should insert the jumper on the X 1 first and then take the 10 k clock source from p4 the corresponding soldering pad.

2.2.2 Interrupt Setting

The DIO-64 provides interrupt function when the second 8254 chip is installed. (Ref. Order information DIO-64/6 on board two 8254 chip)then you can use timer pacer , External pacer or event counting trigger interrupt.

The interrupt levels setting by JP2

Default setting : IRQ15

Note : Be sure there is no other add-on card in the same interrupt level.

2.3. Pin Assignment

CN 1

CN 2

CN 3

CN 4

CN5

2.4. BASE Address Setting

Default Base Address (2A0)

For Example

How to select 2 A 0 (Hex)

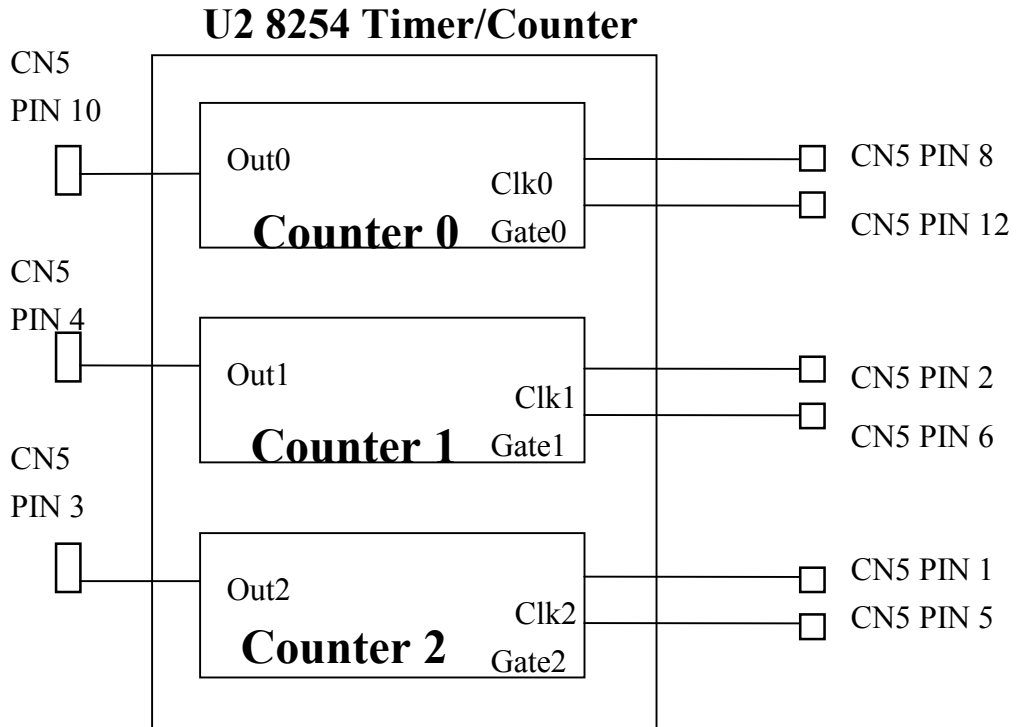

2		A				0
1	0	1	0	1	0	X
A9	A8	A7	A6	A5	A4	X

I/O address	1	2	3	4	5	6
	A9	A8	A7	A6	A5	A4
200-20F	OFF	ON	ON	ON	ON	ON0
.....						
2A0-2AF (*)	OFF	ON	OFF	ON	OFF	OFF
.....						
3F0-3FF	OFF	OFF	OFF	OFF	OFF	OFF

(*) : Default setting

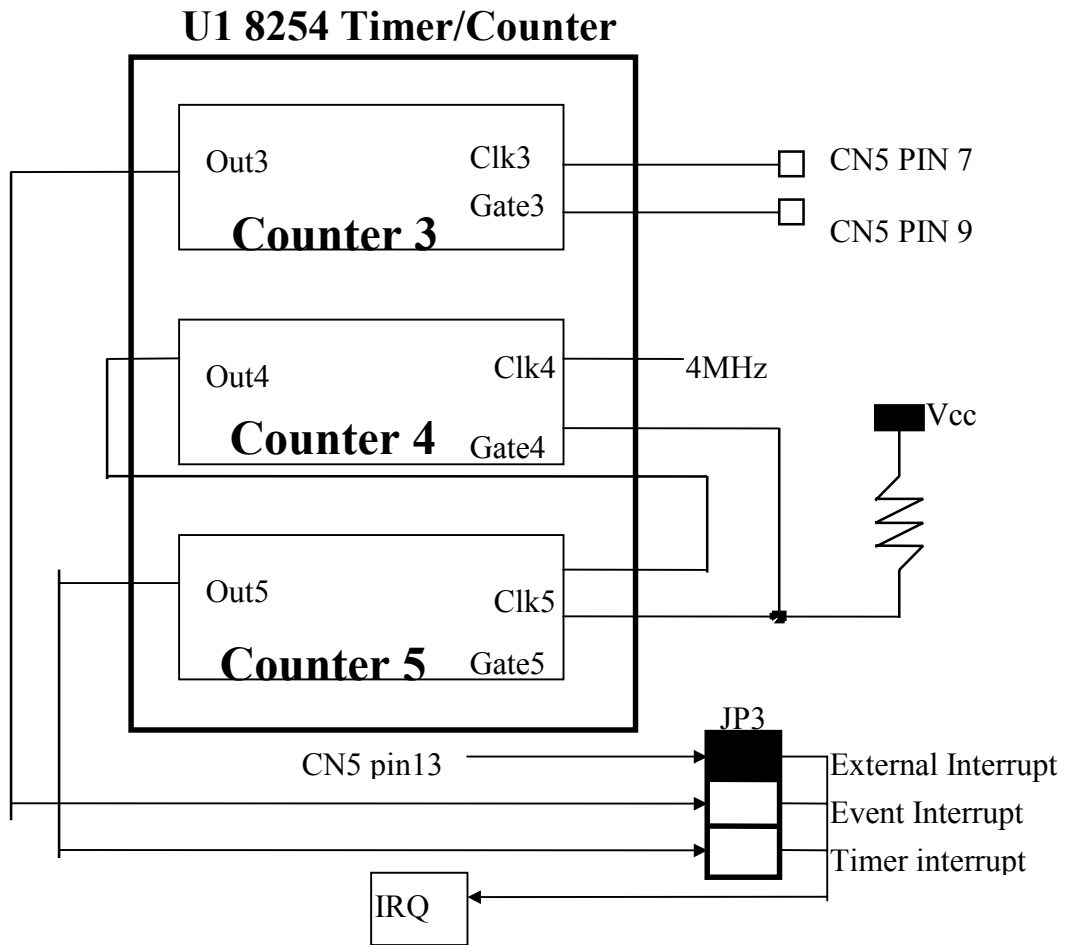

2.5. Timer /counter signal

The First 8254 Chip is for general purposes timer/counter

Pad assignment

Pad assignment

1. The second 8254 chip is used to generate interrupt trigger signals.
2. The counter3 accept event signal and its will generate trigger signal of interrupt .
3. The counter 4 and counter 5 are cascaded together , the clock source is 4Mhz, it can generate timer pacer trigger of interrupt.

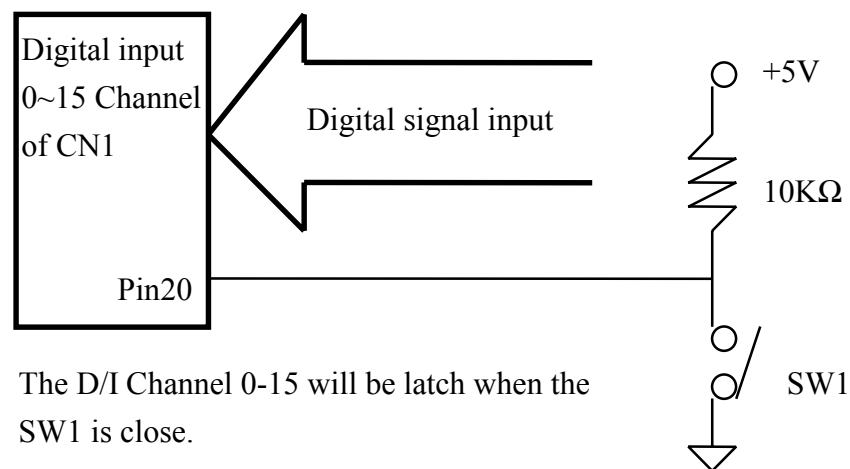

Note : The second 8254 chip is option (Ref. Order information)

If the second 8254 chip is not installed only the external interrupt function can be used.

2.6. How to latch the digital input

In some application, you want to use a external signal to latch the input, you can use the STROBE pin. Refer to the following figure.

STROBE CN2 Pin 20 or CN4 Pin 20

Note : If no signal is connected to strobe pin , the input data is transparent.

3. I/O Register & Programming

3.1. I/O Registers

The DIO-64 I/O register show in Table 3-1

I/O Address	Read	Write
Base+0	D/I CH: 0-7	D/O CH 0-7
Base+1	D/I CH 8-15	D/O CH 8-15
Base+2	D/I CH 16-23	D/O CH 16-23
Base+3	D/I CH 24-31	D/O CH 24-31
Base+4	Counter 0	
Base+5	Counter 1	
Base+6	Counter 2	
Base+7	Control Word of Counter 0-2	
Base+8	Counter 3	
Base+9	Counter 4	
Base+A	Counter 5	
Base+B	Control Word of Counter 3-5	

D/I: Digital Input

Table 3.1

D/O: Digital Output

Counter n : Timer/Counter Channel

3.2. Digital Input and Digital Output

The DIO-64 provides 32 digital input channels and 32 digital output channel

3.2.1 Digital Input Data Format

Address	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Base+0	D/I 7	D/I 6	D/I 5	D/I 4	D/I 3	D/I 2	D/I 1	D/I 0
Base+1	D/I 15	D/I 14	D/I 13	D/I 12	D/I 11	D/I 10	D/I 9	D/I 8
Base+2	D/I 23	D/I 22	D/I 21	D/I 20	D/I 19	D/I 18	D/I 17	D/I 16
Base+3	D/I 31	D/I 30	D/I 29	D/I 28	D/I 27	D/I 26	D/I 25	D/I 24

3.2.2 Digital Output Data Format

Address	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Base+0	D/O 7	D/O 6	D/O 5	D/O 4	D/O 3	D/O 2	D/O 1	D/O 0
Base+1	D/O 15	D/O 14	D/O 13	D/O 12	D/O 11	D/O 10	D/O 9	D/O 8
Base+2	D/O 23	D/O 22	D/O 21	D/O 20	D/O 19	D/O 18	D/O 17	D/O 16
Base+3	D/O 31	D/O 30	D/O 29	D/O 28	D/O 27	D/O 26	D/O 25	D/O 24

3.3. Programming

3.3.1 Digital Input

The digital input states are read as a byte from the port at I/O register Base+n (ref. sec. 3)

For example: (Basic Language)

Bas=&H2A0	'Set Base Address
DIVALUE0=INP(BAS+0)	'Read D/I Channel 0-7
DIVALUE1=INP(BAS+1)	'Read D/I Channel 8-15
DIVALUE2=INP(BAS+2)	'Read D/I Channel 16-23
DIVALUE3=INP(BAS+3)	'Read D/I Channel 24-31

3.3.2 Digital Output

The digital output states are written a byte to the I/O registers Base+n (ref. sec 3.)

For Example (Basic Language)

BAS=&H2A0	'Set Base address 2A0 Hex
OUT BAS+0 , &H1	'Set D/O Channel 0 High
OUT BAS+1 , &HFF	'Set D/O Channel 8-15 High
OUT BAS+2 , &H8	'Set D/O Channel 19 High
OUT BAS+3 , &H0	'Set D/O Channel 24-32 Low

3.4 Timer / Counter

3.4.1 8254 Programmable Interval Timer

The 8254 contains three independent, programmable, multi-mode 16-bit timers/counters . It is designed as a general purpose device .

The 8253 can generate accurate time delays under the control of system software. The three independent 16-bit counters can be programmed clocked at rates from DC to 8MHz . The software controls the loading and starting of the counters to provides accurate multiple time delays.

For more information about the 8254, Please refer to the Intel Microprocessor and Peripheral Handbook

3.4.2 I/O Register

Base+4	Low Byte or High Byte of Counter 0
Base+5	Low Byte or High Byte of Counter 1
Base+6	Low Byte or High Byte of Counter 2
Base+7	Counter 0-2 Control Word
Base+8	Low Byte or High Byte of Counter 3
Base+9	Low Byte or High Byte of Counter 4
Base+A	Low Byte or High Byte of Counter 5
Base+B	Counter 3-5 Control Word

3.4.3 Control Word Format

Base+7 (Counter 0-2) and Base+B (Counter 3-5)

D7	D6	D5	D4	D3	D2	D1	D0
SC1	SC0	RL1	RL0	M2	M1	M0	BCD

Note :

SCn : Select Counter

RLn : Read/Load

Mn : Mode

SC - Select Counter

SC1	SC0	Counter
0	0	Select Counter 0
0	1	Select Counter 1
1	0	Select Counter 2
1	1	Invalid

RL - Read/Load

RL1	RL0	Read/Load
0	0	Counter Latching Operation
1	0	Read/Load most significant byte only
0	1	Read/Load least significant byte only
1	1	Read/Load least significant byte first, then most significant byte

M - Mode

M2	M1	M0	Mode
0	0	0	Mode 0 (Interrupt on terminal count)
0	0	1	Mode 1 (Programmable One-Shot)
0	1	0	Mode 2 (Rate Generator)
0	1	1	Mode 3 (Square Wave Rate Genrate)
1	0	0	Mode 4 (Software Strobe)
1	0	1	Mode 5 (Hardware Triggered Trobe)

Please Ref. Intel Data Sheet mode Control of 8253 or 8254 Chip

BCD

0	Binary counter, 16-bits
1	BCD Counter, 4-decades

3.5 Programming Timer/Counter

Programming in Basic Language

First , Initial the Timer/Counter Channel , Read/Write Control , Mode , BCD.

Example :

- (1) Counter Select : channel 0
- (2) Read/Write Control : Read least significant byte then most significant byte
- (3) Mode Control : Mode 0 (Interrupt on terminal count)
- (4) BCD mode

the control word shows as following tables (Ref. Sec. 3.4)

Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
SC1	SC0	RL1	RL0	M2	M1	M0	BCD
0	0	1	1	0	0	0	0
8	4	2	1	8	4	2	1

Control Word : 0x3 0

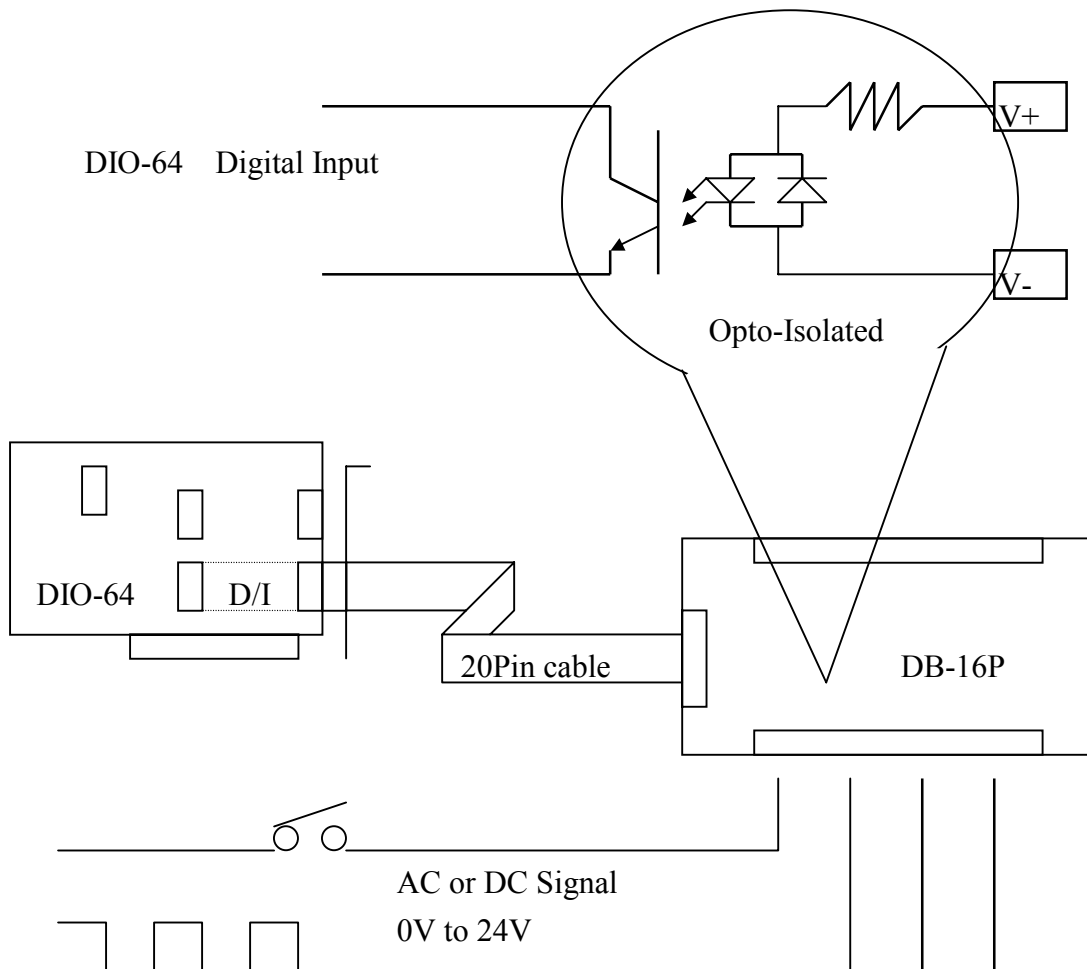

```

Bas=&h2C0                ' Set Base Address
' Initial 8253
Out Bas + 7 , &H30       ' Write First 8254 Chip Control Word
Out Bas + 4 , &H10       ' Write LSB First
Out Bas + 4 , &H10       ' Then Write MSB
' Read Counter
WHILE CDATA> 0
    LSB = Inp(Bas+4)     ' Read Counter Channel 0 LSB
    MSB= Inp(Bas+4)     ' Read Counter Channel 0 MSB
    CDATA=MSB*256+LSB
    PRINT " Counter Value = "; CDATA
WEND
END
  
```

4. Terminal Board

4.1 DB-16P

The DB-16P is a 16 Channel isolated digital input daughter board . The optically isolated inputs of the DB-16P consists of a bi-directional optocoupler with a resistor for current sensing . You can use the DB-16P to sense DC signal from TTL levels up to 24V. or use the DB-16P to sense a wide range of AC signals. You can use the board to isolate the computer from large common-mode voltages, ground loops and voltage spikes that often occur in industrial environments.

4.2 DB-16R

The DB-16R 16 channel relay output board consists of 16 from C relays for efficient switch of load by programmed control . It is connector and functionally compatible with 785 series board but with industrial type terminal block . The relay are energized by apply 5 voltage signal to the appropriated relay channel on the 20-pin flat connector 16 enunciator LED's, One for each relay, light when their associated relay is activated . To avoid overloading your PC's power supply, this board provides a screw terminal for power supply.

Note:

Channel : 16 From C Relay

Relay : Switching up to 0.5A at 110ACV / 1A at 24DCV

DIO-48 48 Bit OPTO-22 Compatible DI/O Board

1. Features

- 48 digital I/O lines
 - OPTO-22 pin compatible
 - Buffer output for higher driving capability than 8255
 - High output driving capability
 - One 16 bit programmable event counter
 - One 32 bit programmable timer
 - Programmable interrupt handling
 - 32.768KHz , 1MHz, 2MHz or 4MHz clock source
 - IRQ level: IRQ3.....IRQ15
-

2. Applications

- Interfacing with any OPTO-22 compatible I/O module
 - Digital I/O control
 - Contact closure monitoring
 - Useful with parallel interface devices
-

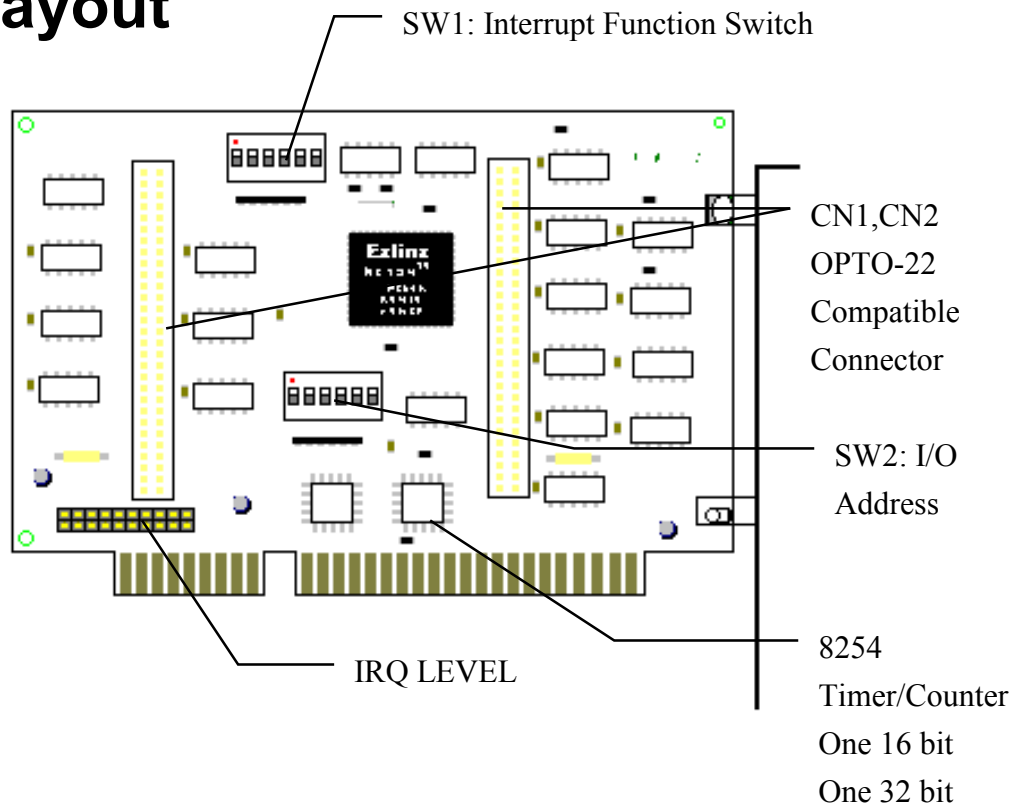

3. Specification

- Logic inputs and output
 - Input logic high voltage : 2.0V(Min)/5.0V(Max)
 - Input logic low voltage : -0.5V(Min)/0.8V(Max)
- Input load current : -0.45mA(Min)/+70 μ A
- Output sink current : +64mA(Max)
- Output source current : -15mA
- All outputs and inputs are TTL Compatible
- Power consumption : +5V @ 250mA
- Environmental :
 - Operating Temperature : 0 to 60°C
 - Storage Temperature : -20°C to 80 °C
 - Humidity : 0 to 90 % non-condensing

4. Functional Description

The DIO-48 provides 48 TTL digital I/O lines. It emulates two channel 8255 mode 0 (basic input / output mode) and has an increased output current of 15 mA (source) and 64mA (sink), allowing it to drive LED, relay, etc. Each connector consists of three 8 bit bi-directional ports and two input lines for interrupt enable and interrupt. The eight bit ports are named port A(PA), port B(PB), port C(PC). The port C can be split into two nibble wide ports. All ports are configured as inputs upon power-up or reset. The DIO-48 uses 3 consecutive I/O locations in I/O addressing space. The base address is selectable using a 6-position dip switch from 200 to 3FF hex. The interrupt signal can be connected to any of the interrupt levels 2 through 15 available on the PC bus via a jumper.

4.1 Layout

4.2 Jumper setting

4.2.1 Interrupt jumper setting

4.2.2 IRQ Source Selection

The DIO-48 provides event trigger mode & timer trigger mode for interrupt handling. You can use SW1 to set trigger method and clock source.

SW1-1	SW1-2	SW1-3	SW1-4	SW1-5	SW1-6
IRQ	Function	Selection	Trigger Edge	Clock	Source Selection

SW1-1	SW1-2	SW1-3	Mode.	Interrupt Function
On	On	On	0	Event Trigger from PC1D0
Off	On	On	1	Timer Trigger
On	Off	On	2	PC1D3
Off	Off	On	3	PC1D3 & !PC1D7
On	On	Off	4	PC2D3
OFF	On	Off	5	PC2D3 & !PC2D7
On	Off	Off	6	Soft Trigger
Off	Off	Off	7	Disable Interrupt

Note:

Mode 0 (Event trigger) : Clock source PC1D0 via 8254 counter 0 (16 bit) to generate an interrupt

Mode 1 (Timer trigger): Clock source 2MHz or 32.768KHz internal clock via 8254 counter 1 cascaded to counter 2 (32 bit) to generate an interrupt

Mode 2 ~ Mode 5 : Direct generate interrupt signal from D3 or D7 (! : NOT logic)

Mode 6 (Soft trigger) Direct generate interrupt signal from I/O register (programmable).

Mode 7 (Disable) Disable interrupt function.

SW1-4	Function
On	Falling Edge Trigger
Off	Rising Edge Trigger

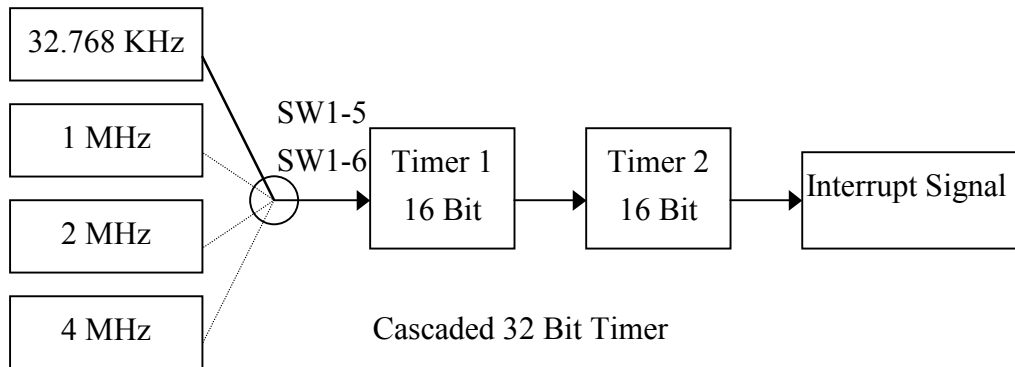

Falling Edge Trigger

Rising Edge Trigger

SW1-5	SW1-6	Function
ON	ON	32.768KHz (RTC)
OFF	ON	1MHz
ON	OFF	2MHz
OFF	OFF	4MHz

4.3 Base address Setting

I/O Address	1 A9	2 A8	3 A7	4 A6	5 A5	6 A4
200-20F	1	0	0	0	0	0
210-21F	1	0	0	0	0	1

5. PROGRAMMING

The DIO-48 offers two OPTO-22 connector which emulates MODE 0 of 8255. The mode 0 of 8255 provides basic input and output operations through each of the ports A, B and C . Output data is latched and input data follows the peripheral.

Mode 0 of 8255 PPI Functions

- 16 different configurations
- Two 8-bit port and two 4bit-ports
- Input are not latched
- Output are latched

5.1. I/O Register

Address (Hex)	Read	Write
Base+0	CN1_Port A Input	CN1_Port A Output
Base+1	CN1_Port B Input	CN1_Port B Output
Base+2	CN1_Port C Input	CN1_Port C Output
Base+3	Clear Interrupt	Configured Word
Base+4	CN2_Port A Input	CN2_Port A Output
Base+5	CN2_Port B Input	CN2_Port B Output
Base+6	CN2_Port C Input	CN2_Port C Output
Base+7	Soft Interrupt trigger	Configured Word
Base+8	NA	NA
Base+9	NA	NA
Base+A	NA	NA

Example :

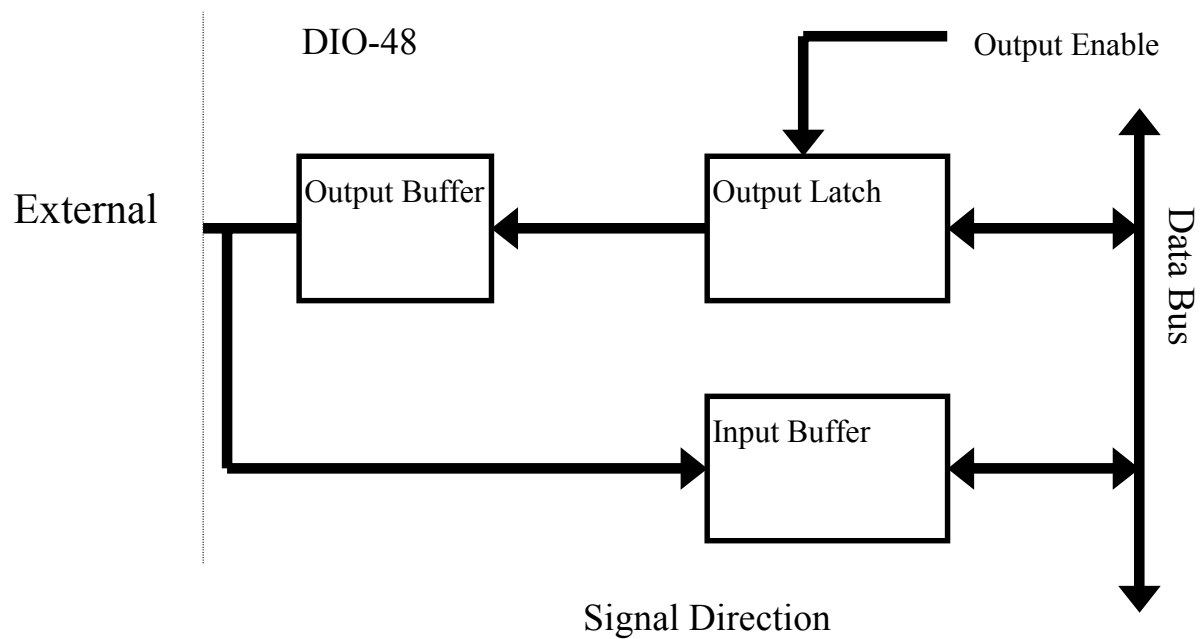

Out bas+&H3 , &H80 'the CN1 all port will be configured as output mode

Out bas+&H7, &H9B 'the CN2 all port will be configured as input mode

5.2. Digital Input / Output

The DIO-48 Signal direction can be software programmable . When the user turn on or reset computer , all ports will be configured as input mode.

When the DIO-48 is programmed as an output mode , it will not output until program execute the output instruction.

5.2.1 D/I/O Demo program

The DIO-48 I/O card is very easy to programming input/ Output function .

Example (Quick Basic)

```
Bas=&H2C0
```

```
'=====Init DIO-48 Port A and Port B Input mode Port C output mode =====
```

```
OUT Bas+3,&H92          ' Reference Configuration table
```

```
'=====
```

```
PA = INP(Bas+0)         'Read Port A Data
```

```
PB = INP(Bas+1)         'Read Port B Data
```

```
OUT Bas+2 , &HFF        'Write Data to Port C , set Channel 0-7 is  
high
```

```
OUT Bas+3,&H80          ' Set Port A,B,C is Output Mode
```

```
OUT Bas+0, 0            ' Write Data to Port A
```

```
OUT Bas+1, 0            ' Write Data to port B
```

```
OUT Bas+2, 0            ' Write Data to Port C
```

```
OUT Bas+3,&H9B          ' Set Port A,B,C is Input mode
```

```
PA=INP(Bas+0)           ' Read Port A Data
```

```
PB=INP(Bas+1)           ' Read Port B Date
```

```
PC=INP(Bas+2)           ' Read Port C Date
```

Digital input / output example program (C Language) : DEMO_01.EXE ,
DEMO_02.EXE

5.3. Interrupt Handling

The Port C0 of each co up to computer.
Use the interrupt you must set the IRQ level to be used. The JP1 is used to select IRQ level and the SW1 is used to select the desired interrupt trigger mode .

1. Set JP1 interrupt level 3~15
2. Set SW1 (1~3) to select interrupt mode

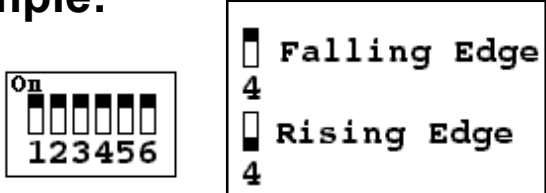

Mode 0	Event trigger (Clock source CN1_Port C 0)
Mode 1	Timer trigger (Clock Source 32.768KHz or 1MHz or 2MHz or 4 MHz)
Mode 2	CN1_Port C 3 direct trigger
Mode 3	CN1_Port C 3 & !C7 direct trigger
Mode 4	CN2_Port C3 direct trigger
Mode 5	CN2_Port C3 & !C7 direct trigger
Mode 6	Soft trigger (read Base + 7)
Mode 7	Disable

3. (Event trigger only) Set SW1 (4) to select edge trig (On : Falling edge trigger , Off : Rising edge trigger)
4. (Timer trigger only) Set SW1 (5) to select timer clock source.

5.3.1 Interrupt Setting Example:

SW1: Setting

Mode 0 : Event Trigger
Demo program : IRQ_EVNT.EXE

Set 8254 Configured : Counter 0,
Mode 1 ,Data : 100

The 8254 counter 0 will output interrupt signal until external device generate 100 time signal to CN1_port C0 .

Mode 1 : Timer trigger

SW1 Setting

Demo program : IRQ_TIM.EXE

- 32.768 KHz
- 1MHz
- 2MHz
- 4MHz

8254 configured : Mode 1,
 Counter 1 data : 32768
 Counter 2 data : 10
 Output interrupt signal freq.: 0.1 Hz
 $32.768\text{KHz} / (32768 \times 10) = 0.1 \text{ (Hz)}$
 Each 10 sec will generate an interrupt

Mode 2 : Direct trigger from CN1_Port C3

Demo program : IRQ_PC3F.EXE

Mode 3 : Direct trigger from CN1_Port C3 & !CN1_Port C7

Demo program : IRQ_PC37.EXE

Interrupt signal generate :
 when external device 2
 output low and external
 device 1 generate falling
 edge signal.

Mode 4 : Direct trigger from CN2_Port C3

Demo program : IRQ_PF3F.EXE

Same as Mode 2 , trigger source change to CN2_Port C3

Mode 5 : Direct trigger from CN2_Port C3 & !CN2_Port C7

Demo program : IRQ_PF37.EXE

Same as mode 3 , trigger source change to CN2_Port C3 & C7

Mode 6 : Soft trigger

Demo program : IRQ_SOFT.EXE

Interrupt signal generated when you read BAS+3 register .

Mode 7 : Disable interrupt

Interrupt function disable .

5.3.2 Demo program : IRQ_TIM.EXE Source

Code:

```
/* Program      : Pacer-trigger IRQ test program.  
   Description  : This program generate the pacer signal by control 8254.  
                 And 8254 will acknowledge PC by generating IRQ.
```

Hardware setting: The DIP switch SW1 should be set as following :

1 : OFF 2 : ON 3 : ON 4 : DON'T CARE

5 , 6 : pacer clock input select.

ON ON : RTC (real time clock 32.768K Hz)

OFF ON : 1.0 M Hz

ON OFF : 2.0 M Hz

OFF OFF : 4.0 M Hz

IRQ : Set by IRQ 5

Note : This program can be compiled both in Turbo C 2.0 or
or Turbo C++ 3.0 and running under DOS environment.

*/

```

#include <stdio.h>
#include <conio.h>
#include <dos.h>
#ifdef __cplusplus
#define __CPPARGS    ...
#else
#define __CPPARGS
#endif
#include <stdio.h>
#include <conio.h>
#include <dos.h>
#define BASE        0x2C0
#define TIMER0      0x0C
#define TIMER1      0x0D
#define TIMER2      0x0E

int irq_gen;

void interrupt ( *old_irq5)(__CPPARGS);

void set_8254(unsigned int port,unsigned int value)
{
    unsigned int control;
    control = 0x36 | ( (port==TIMER2) ? 0x80 : 0x40 );
    outp(BASE+0x0F,control);
    outp(BASE+port,value & 0xff);
    outp(BASE+port,(value & 0xff00) >> 8 );
}

void disable_8254(unsigned int port)
{
    unsigned int control;
    control = 0x30 | ( (port==TIMER2) ? 0x80 : 0x40 );
    outp(BASE+0xF,control);
    outp(BASE+port,0x00);
    outp(BASE+port,0x00);
}

void interrupt irq5_isr(__CPPARGS)
{
    disable();
    irq_gen = 1;
    disable_8254(TIMER1);
    disable_8254(TIMER2);
}

```

```

    inp(BASE+3);          // clear irq
//  outp(0xa0,0x20); // re-enable 8259
    outp(0x20,0x20);
    enable();
}

void main(void)
{
    disable_8254(TIMER1);
    disable_8254(TIMER2);
    inp(BASE+3);          // clear previous irq
    old_irq5 = getvect(0x0d);
    setvect(0x0d, irq5_isr);
    outp(0x21, inp(0x21) & 0xdf);          // enable 8259
//  outp(0xa1, inp(0xa1) & 0xfb);

    do {
        irq_gen = 0;
        set_8254(TIMER1,0x3);
        set_8254(TIMER2,0xff);
        while(irq_gen==0);          // wait till irq happen
        printf("\n IRQ generate ... ");
    } while((getch()|32)!='q');
    setvect(0x0d, old_irq5);
    outp(0x21, inp(0x21) | 0x20);          // disable irq 5 interrupt
    getch();
}

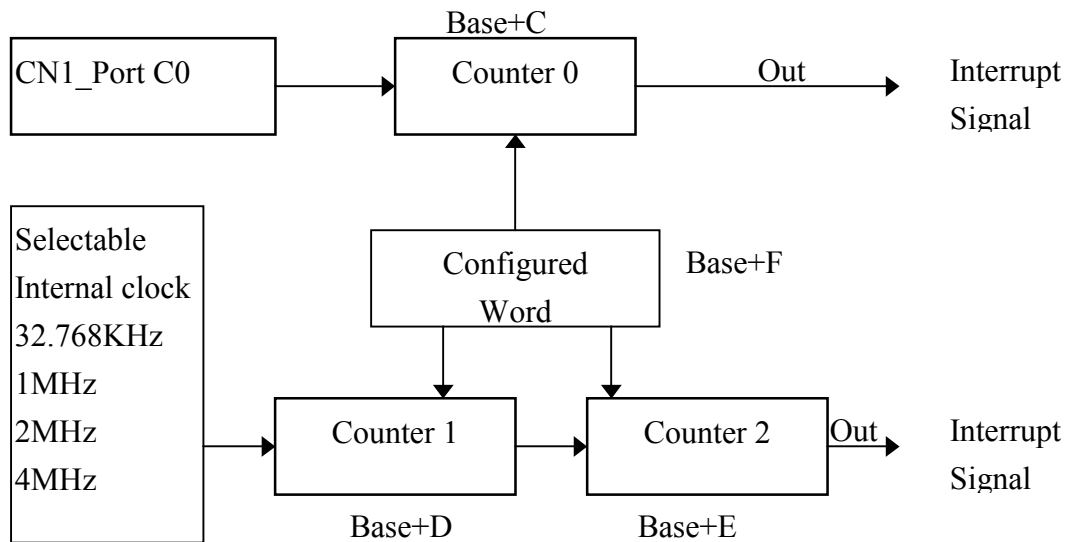

```

Demo program reference table

Function	Demo program
Event trigger	IRQ_EVNT.EXE
Timer trigger	IRQ_TIM.EXE
CN1_PC3 direct trigger	IRQ_PC3F.EXE
CN1_PC3 & PC7 direct trigger	IRQ_PC37.EXE
CN2_PC3 direct trigger	IRQ_PF3F.EXE
CN2_PC3 & PC7 direct trigger	IRQ_PF37.exe
Soft trigger	IRQ_SOFT.EXE

5.4. 8254 Timer / Counter

The 8254 programmable timer / counter has 4 registers, it occupies 4 I/O address from Base + C through Base + F. for detail programming information about 8254. Please refer to Intel's "Microsystem Components Handbook".

Register	Function
Base+C	LSB or MSB of Counter 0
Base+D	LSB or MSB of Counter 1
Base+E	LSB or MSB of Counter 2
Base+F	Configured Word

Configured Word

Bit	7	6	5	4	3	2	1	0
	CS1	CS0	RW1	RW0	M2	M1	M0	BCD

● **CS1,CS0 : Counter Select**

CS1	CS0	Counter
0	0	Counter 0
0	1	Counter 1
1	0	Counter 2
1	1	Illegal

● **RW1 , RW0 : Read / Write operation**

RW1	RW0	Operation
0	0	Counter Latch
0	1	Read/Write LSB
1	0	Read/Write MSB
1	1	Read/Write LSB First then MSB

● **M2, M1 & M0-Select Operating Mode**

M2	M1	M0	Mode
0	0	0	Interrupt Terminal Count
0	0	1	Programmable One-Shot
0	1	0	Rate Generator
0	1	1	Square Wave Rate Generator
1	0	0	Software Triggered Strobe
1	0	1	Hardware Triggered Strobe

● **BCD : Select Binary / BCD counting**

BCD	Counting
0	Binary Counter 16 bit
1	Binary Coded Decimal (BCD) Counter (4 Decades)

Program :

```

BASE=0x2c0;
outp(BASE+0x0F, 0x36);    /* Configured Word : Counter 0 , Read/Write LSB
                           then MSB , Square Wave Rate Generator
                           Mode , Binary Counter 16 bit */
outp(BASE+0x0C, 0xff);    /* Write Counter 0 LSB */
outp(BASE+0x0C, 0x10);    /* Write Counter 0 MSB */

```

6. Daughter Board

The DIO-48 offers two 50 pin Opto-22 connector which can be connected to daughter board , such as :

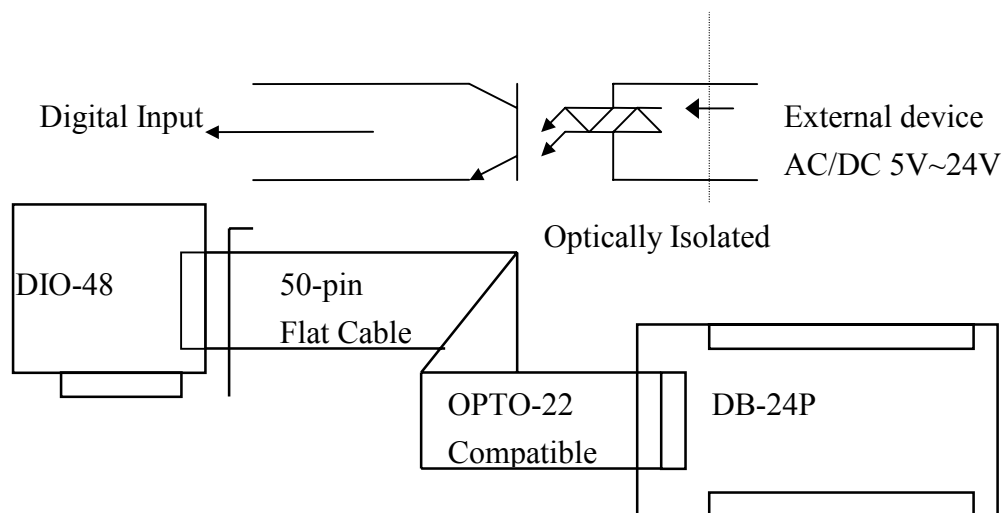

1. DB-24P 24 Opto-isolated Digital Input Terminal Board
2. DB-24R 24 Relay Output Board
3. DB-24PR 24 Power Relay Output Board

6.1 DB-24P (Isolated Input board)

The DB-24P is a 24 Opto-isolated Digital input terminal board.

Features:

- 24 optically isolated digital input channels
- AC/DC signal Input
- AC Signal Input with filter
- Input buffer with voltage comparators.
- Maximum input voltage : 24VDC or 24VAC.
- Board Dimension : 8.66"(220mm) X 5.20" (132mm)

6.2 DB-24R (Relay Board)

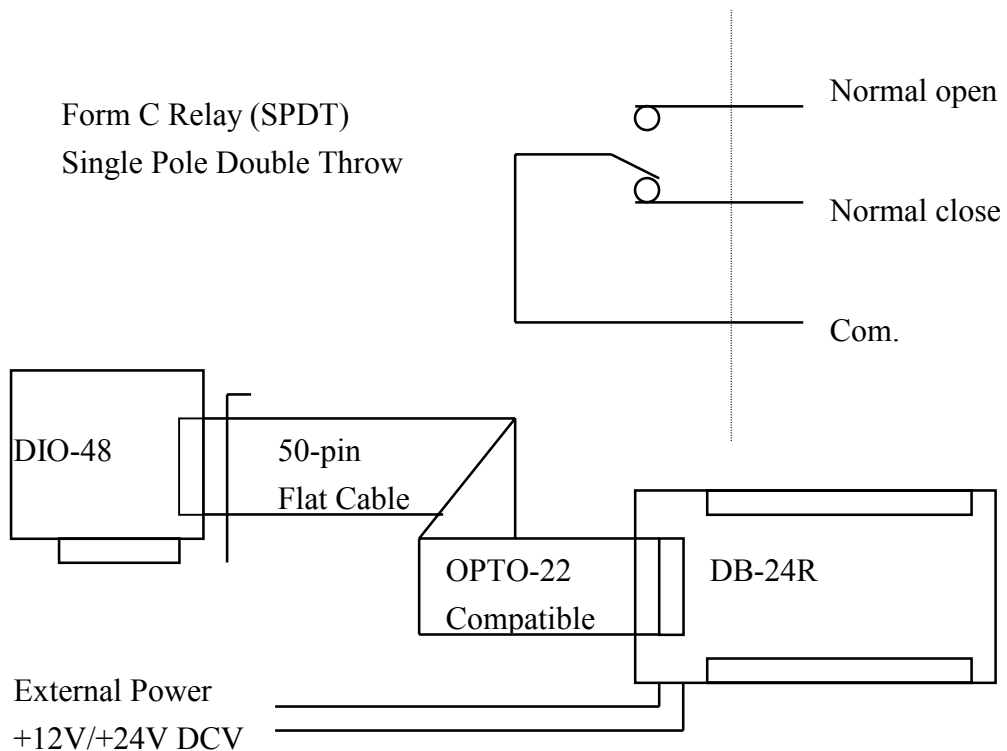

The DB-24 is a 24 channel relay output board

Features

- 24 Form C Relays
- Switch up to 1A at 30VDC or 110VAC
- LEDs indicated relay status
- Screw terminals for easy field wiring

Order information:

- DB-24R/12V 24 Channel Relay output Board (Coil Voltage : 12VDC)
- DB-24R/24V 24 Channel Relay output Board (Coil Voltage : 24VDC)

6.3 DB-24PR (Power Relay Board)

The DB-24PR is 24 Channel Power Relay output Board.

Specification:

- 16 Form A Relays (SPST) and 8 form C Relays (SPDT)
- Switch up to 5A at 250VAC or 30VDC
- Building varistor to protect each channel's high voltage spike.
- LED indicate relay status
- Screw terminals for easy field wiring

Order Information:

- DB-24PR/12V : 24 Channel 5A/250VAC Relay Board / 12V Coil Voltage Version
- DB-24PR/24V : 24 Channel 5A/250VAC Relay Board / 24V Coil Voltage Version
