# Overview

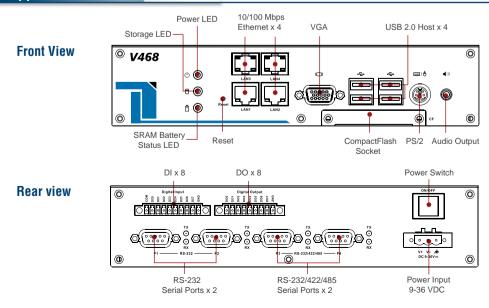

The V468 embedded computer is based on the AMD x86 processor, and features 4 serial ports, quad LAN ports, 4 USB 2.0 hosts, and CompactFlash. A VGA interface is included to make the V468 particularly well-suited for industrial applications, such as SCADA and factory automation.

The V468's 4 serial ports make the computer ideal for connecting a wide range of serial devices, and the quad 10/100 Mbps Ethernet ports offer a reliable solution for network redundancy, promising continuous operation for data communication and management. As an added convenience, the V468 has 8 DI and 8 DO interfaces for connecting

digital input/output devices. In addition, the CompactFlash and USB sockets provide the V468 with the reliability needed for industrial applications that require data buffering and storage expansion.

The V468 comes with the Windows Embedded CE 6.0 operating system already installed. WinCE 6.0 provides programmers with a friendly environment for developing sophisticated, bug-free application software at a lower cost.
